

Air Program Advisory Forum 2004 Stakeholder WorkGroup December 9, 2004

**MoEIS Update
Dave Freeman**

MoEIS file transfer component:

EPA's recent pilot project (Rapid Inventory Development Pilot) update.

- The EPA pilot project mentioned in previous meetings will **not** help the APCP get the needed file transfer component in place. This project would require double data entry for any participants who wish to participate. The EPA's contractor advises that present tracking systems stay in place for participants due to this being a pilot project. After this initial meeting with EPA contractors on 12/8/04. The APCP doesn't feel that we need to allocate any resources to participate in this project due to the present stage of MoEIS being more advanced than what is being proposed by EPA.
- The APCP's participation will be to develop the file transfer component we need in house and provide emission data to this project by generating an XML file that will be used by the EPA contractor in this pilot project. The APCP will not be entering data into the contractor's system in the way the pilot project is to be set up.

MoEIS, file transfer component update.

- The APCP had requested this previously in a request to the same program in early 2003. This request involved developing a web portal to give the local agencies access to MoEIS along with a file transfer component. While using a contractor to help develop this project the file transfer component portion of the project ballooned out of budget and development was stopped.
- The APCP emission and DP staff will be meeting with the MoDNR MIS program to start this project again by developing it in house using MoDNR IT resources. The first of these meetings will take place before the end of the year and development should start in early 2005.

The MoDNR MIS director has indicated to the APCP DP manager that this is being made a priority and resources will be allocated to get this done for use as soon as possible.

This and other updates will be posted on the APAF web site at:
